## ADDITIONAL HYGIENE SERVICES GUIDELINES ON ROUTINE & DEEP CLEANING DURING COVID-19

### 6. Executive Summary

- 6.1. coronavirus disease 2019 (covid-19) is a respiratory disease caused by the sars-cov-2 virus. to reduce the impact of covid-19 outbreak conditions on businesses, workers, customers, and the public, it is important for all employers to plan now for covid-19.
- 6.2. **SEDFA** has a legal obligation in accordance with section 8 of occupational health & safety act (osha), act no.85 of 1993 as amended to where reasonably practicable, provide a safe work environment that is without risk to employees.

### 7. BACKGROUND

- 7.1. According to the world health organization (who), the two main routes of transmission of the sars-cov-2 is droplet and direct contact transmission. respiratory droplets are generated when an infected person coughs or sneezes and any person who is in close contact is at risk of being exposed to these droplets. droplets may also land on surfaces where the virus could remain viable. Therefore, the immediate environment of an infected individual can serve as a source of contact transmission.
- 7.2. The aim of this document is to provide guidance on routine cleaning of non-health care and health care workplaces as well as deep cleaning when covid-19 positive cases have been identified.

### 8. CLEANING AND DISINFECTING SOLUTIONS

- 8.1. Cleaning and disinfecting are two different processes:
  - a. **Cleaning** means to physically remove germs (bacteria and viruses), dirt and grime from surfaces using a detergent and water solution. A detergent is a surfactant that is designed to break up oil and grease with the use of water. anything labelled as a detergent will work.
  - b. **Disinfecting** means using chemicals to kill germs (bacteria and viruses) on surfaces. it's important to clean before disinfecting because dirt and grime can reduce the ability of disinfectants to kill germs. The following disinfectants are suitable for use on hard surfaces (that is, surfaces where any spilt liquid pools, and does not soak in): alcohol in a concentration of at least 70%, chlorine bleach in a concentration of 1000 parts per million, oxygen bleach, or wipes and sprays that contain quaternary ammonium compounds. These chemicals will be labelled as

'disinfectant' on the packaging and must be diluted or used following the instructions on the packaging to be effective. for routine workplace cleaning in a non-healthcare workplace, physical cleaning with water and detergent is usually sufficient. water and physical effort alone will not kill the covid-19 virus.

8.2. A combination of cleaning and disinfection will be most effective in removing the covid-19 virus in workplaces when cleaning and should be used where there is a high volume of workers, customers or visitors that are likely to touch surfaces.

8.3. Cleaning and disinfection should also be undertaken after a person with a confirmed or suspected case of covid-19 has recently been at the workplace. Those cleaning an area of suspected contamination need to be equipped with appropriate personal protective equipment (ppe). This includes disposable gloves and safety eyewear to protect against chemical splashes. If there is visible contamination with respiratory secretions or other body fluids in the area, the cleaning staff should also wear a disposable apron.

8.4. Once cleaning and disinfection is complete, place disposable cloths, ppe and covers in a plastic rubbish bag, place it inside another rubbish bag (double bagging) and dispose of the bag in the general waste.

**NOTE:** disinfectants require sufficient contact time to be effective at killing viruses. if no time is specified, the disinfectant should be left for ten minutes before removing.

## **9. USING DISINFECTANTS SAFELY**

9.1. Follow all manufacturers' instructions and read the label and the safety data sheet (SDS). do not use different types of disinfectants together.

9.2. Store your disinfectants safely and securely, out of direct sunlight and away from heat sources. mix your disinfectants in a well-ventilated area. some concentrated products recommend the use of a local exhaust ventilation system.

9.3. For spraying or misting products, spray directly into the cleaning cloth to dampen the cloth for use. Take care not to generate mist.

9.4. Personal protective equipment (PPE) to use when diluting and using disinfectants includes gloves, elbow-length if available, and eye protection (safety glasses, not prescription glasses).

## **10. RECOMMENDED CLEANING BY SURFACE**

10.1. The recommended minimum frequencies for routine cleaning of various surfaces in the workplace, as well as recommended cleaning and disinfecting following a suspected or confirmed case of covid-19.

10.2. It is applicable to all workplaces, noting some surfaces may not be relevant to all workplaces.

10.3. It is highly recommended that workplaces are be cleaned at least daily. more frequent cleaning may be required in some circumstances. for example, if equipment is shared between workers, it should be cleaned between uses, where practicable.

10.4. More frequent disinfection may be required at workplaces with a high volume of workers, customers or visitors that are likely to touch surfaces.

## **11. RECOMMENDED CLEANING BY ITEM**

11.1. It is applicable to all workplaces, noting some items may not be relevant to all workplaces.
